PREFAZIONE

Ogni affermazione nel campo coloniale ha due lati che importa egualmente considerare e sviluppare: quello economico e quello culturale. Meglio se l'uno, come spesso accade, è fondamento e mezzo per l'incremento dell'altro. Perciò da tempo si è dato nelle nostre colonie il necessario impulso anche alla meteorologia cioè ad un ramo di ricerche troppo spesso negletto e relegato in secondo piano. Ma uno squallido elenco di numeri non avrebbe alcuna importanza se da esso non scaturissero indicazioni positive da cui talune attività fondamentali ormai non possono più prescindere. Senza parlare dell'Aeronautica di cui è troppo noto il legame con la meteorologia che, a buon diritto può chiamarsi uno dei suoi occhi, basterà ricordare l'agricoltura e la colonizzazione propriamente detta, con l'insieme dei problemi che ne risultano: delle sedi, delle culture, del rendimento, complicati da quello dell'approvvigionamento idrico, non solo in relazione questo all'entità e ripartizione delle piogge, bensì ancora alle disponibilità delle falde sotterranee alimentate a lor volta, principalmente se non esclusivamente, dalle precipitazioni.

Un altro lato della valorizzazione delle colonie, è costituito dalle correnti turistiche che quando non si riducono ad un semplice trascorrere fuggitivo di persone, hanno bisogno di una fonte sicura da cui emergano quelle caratteristiche ambientali che costituiscono una ragione di preferenza in confronto d'altri luoghi o regioni. A tutte queste attività, è necessario che la meteorologia rechi il concorso degli elementi ch'è in suo potere di raccogliere e di fronte al numero ed alla complessità dei problemi di cui deve occuparsi, non sembreranno molte le pagine di questo nuovo Bollettino in cui l'Ufficio Meteorologico, espone le osservazioni più importanti eseguite nelle diverse stazioni delle colonie italiane. Osservazioni, che con i dati già in nostro possesso e quelli che seguiranno devono consentirci, ciò che in parte si è già ottenuto, l'inquadramento di ciascuna zona delle nostre colonie, nella cornice climatologica che è l'espressione più fedele dei caratteri fondamentali d'ognuna e rappresenta in pari tempo la chiave delle loro possibilità.

AVVERTENZE

Allo scopo di riassumere il cumulo dei dati esposti per ogni singola stazione e dare un'idea delle condizioni climatiche verificatesi durante l'anno, si è ritenuto opportuno condensare gli elementi più rappresentativi in una sorta di formula che, mentre illustri le particolarità del periodo considerato, ne indichi per quanto è possibile, il carattere predominante.

L'impiego di tali formule o *climagrammi* (secondo il nome proposto dal Prof. Hellmann che per il primo ne ha fatto uso) dovrebbe avere inoltre lo scopo di mostrare le relazioni intercedenti tra i principali fattori che determinano il carattere o il *tipo* del clima.

Per ottenere questo, è indispensabile disporre i diversi membri del climagramma secondo una successione razionale per modo che ne risulti evidente, sia pure nelle grandi linee, l'azione di ognuno. Meglio poi se, per precisare il carattere dell'annata, è possibile confrontare il relativo climagramma con un altro che esponga i così detti valori *normali* dedotti dal maggior periodo di osservazioni possibile.

Per le stazioni delle nostre colonie, ciò non è per il momento possibile e potrà in parte solo, ottenersi col prossimo bollettino dell'anno 1933, nel quale verranno posti a confronto i dati delle località della Libia che dispongono di maggior numero di osservazioni. Gradualmente, verrà completato un simile lavoro anche per le stazioni dell'Africa orientale.

Soltanto in questo modo i bollettini meteorologici o per meglio dire, la parte riassuntiva degli stessi, potrà diventare accessibile anche a quel numero di studiosi, che pur avendo necessità di conoscere taluni dati climatologici, rifugge dall'esame di lunghe, aride serie numeriche di cui d'altra parte, spesso non potrebbe neppure intendere il significato integrale. Così il climagramma sostituendosi, per tutti, all'enunciazione sommaria, necessariamente imprecisa quando non addirittura arbitraria, varrà a dare alla definizione del clima d'una località o d'una zona, quella base numerica che sola, ha un significato razionale e più si presta alle immediate comparazioni.

Per i climagrammi delle nostre colonie, si è prescelto un tipo più complesso e più completo di quello utilizzato in qualche pubblicazione straniera, naturalmente adottando un certo ordine di successione dei vari membri, identico per ogni stazione e soprattutto tale da rendere superflua qualunque indicazione specifica all'intuori della generica seguente:

I membri d'ogni climagramma sono in numero di cinque:

1° gruppo: Media pressione annua

» » del mese di gennaio

» » » » » luglio

Massima » annua (assoluta)

Minima » » (»)

2° gruppo: Media temperatura annua

I climagrammi sono quindi ordinati, a seconda delle varie zone climatiche in cui è stata ripartita ciascuna colonia.
